Spade Terminal Compatability for JC 1+, JC 5 & A 21+

To determine if your spade connectors will fit, first measure the thickiness. If the thckness is less than 1.25mm follow the diagram for type B. If the thickness is between 1.25mm and 2.65mm follow the diagram for type A. Type B allows for a slightly smaller fork spacing (6.65mm vs 7.70mm).

Although the above diagram show the spades being flat, we reccomeng using spade connectors that have a 30-45' bend. This allows the speaker wire to exit the amplifier at an angle rather than straight down.
